AVX Low Inductance Capacitors

The total inductance of a chip capacitor is determined both by its length to width ratio and by the mutual inductance coupling between its electrodes. Thus a 1210 chip size has a lower inductance than a 1206 chip. This design improvement is the basis of AVX's Low Inductance Chip Capacitors (LICC), where the electrodes are terminated on the long side of the chip instead of the short side. The 1206 becomes a 0612, in the same manner, a 0805 becomes a 0508, a 0603 becomes a 0306. This results in a reduction in inductance for the 1nH range found in normal chip capacitors to less tan 0.2nH for LICC's. Their low profile is also ideal for surface mounting (both on the PCB and on the IC package) or inside cavity mounting on the IC itself.

Characteristics:
- **Operating Temperature Range:** X7R: -55°C ~ 125°C, X5R: -55°C ~ 85°C • **Temperature Coefficient:** ±15% (0VDC) • **Dissipation Factor:** 10V = 5.0% maximum; 16V = 3.5% maximum; 25V = 3.0% maximum
- **Insulation Resistance (@ 25°C RVDC):** 100,000MΩ minimum or 1,000MΩ per uF whichever is less.

KEMET multilayer ceramic chip capacitors are produced in plants designed specifically for chip capacitor manufacture. The process features a high degree of mechanization as well as precise controls over raw materials and process conditions.

Manufacturing is supplemented by extensive technology, Engineering and Quality Assurance programs. Standard end terminations use a nickel barrier layer and a tin overplate to provide excellent solderability.

GJM Series: The Murata GJM Series is a high Q, ultra small capacitor series for high frequency applications in the 500MHz ~ 10GHz range, suitable for VCO and PA Module applications. The GJM Series of capacitors are made with copper electrodes for low ESR and low power consumption due to the high Q (low loss) performance. This series is offered in EIA sizes 0201 and 0402. They are lead free/RoHS compliant. **Features:** • Better Q and low ESR at VHF, UHF, and microwave frequencies • Copper inner electrode • Low power consumption, yield ratio improvement due to the better Q or lower ESR • VCO or PA module applications **Operating Temperature Range:** • C0G (NP0): -55°C ~ 125°C

GRM Series:
The Murata GRM series is a complete line of ceramic chip capacitors with a wide range of voltages and sizes. These capacitors have temperature characteristics ranging from C0G to Z5U. GRM series is offered with a Nickel (Ni) barrier termination plated with Tin (Sn), highly resistant to migration and is RoHS compliant. Stringent dimensional tolerances allow highly reliable, high-speed automatic chip placement on PCBs.

GRM Hi-Cap Series:
The Murata Hi-Cap, Ta replacement product lineup is available with capacitance of 1µF and larger, in voltages of 6.3V ~ 50V. Why use ceramic chips over Ta and Al capacitors? Ceramic chips offer better reliability, electrical performance, no polarity, and allow design engineers to downsize designs with various package options. This line of high volumetric multilayer capacitance ceramic chip capacitors (MLCC) has excellent high frequency noise absorption performance compared to Ta and Al caps. For bypass/decoupling applications, MLCC is equivalent to 1/2 to 1/5 the capacitance value of a Ta capacitor because impedance (ESR) of MLCC is lower at higher frequencies (above 100kHz.) Consider Murata Hi-Cap as your Ta capacitor replacement.

Operating Temperature Range:

• C0G (NP0): -55°C ~ 125°C • U2J: 25°C ~ 85°C • X7R: -55°C ~ 125°C • X6S: -55°C ~ 105°C • X5R: -55°C ~ 85°C • Y5V: -30°C ~ 85°C • Z5U: 10°C ~ 85°C

TAIYO YUDEN Multilayer Ceramic Chip Capacitors

Features: The use of Nickel (Ni) as material for both the internal and external electrodes improves the solderability and heat resistance characteristics. This almost completely eliminates migration and raises the level of reliability significantly. Low equivalent series resistance (ESR) provides excellent noise absorption characteristics. Compared to tantalum or aluminum electrolytic capacitors, these ceramic capacitors offer a number of excellent features, including: • Higher permissible ripple current values • Smaller case sizes relative to rated voltage • Improved reliability due to higher insulation resistance and breakdown voltage

Operating Temperature Range: • C0G: -55° ~ 125°C • X7R: -55° ~ 125°C • X5R: -55° ~ 85°C • X5S: -55° ~ 85°C • Y5V: -30° ~ 85°C

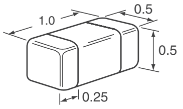
High Frequency Multilayer Ceramic Chip Capacitors



Features: Q-values in the high-frequency range (1 GHz+) are excellent compared to other types of multilayer capacitors. The 1005 (0402) case size is designed for high density mounting and weight reduction in various applications.

Operating Temperature Range: -55 ~ 125°C

Applications: Suitable for those high-frequency applications in which a capacitor with both a high Q-value and small size is required, such as portable communications and other wireless applications: VCO, TCXO, etc. Adjustment of characteristics in high-frequency circuits.

Super Low Distortion Multilayer Ceramic Capacitors (CFCAP)

Features: Newly developed dielectric material and the use of nickel for internal electrodes provide excellent temperature characteristics with high capacitance, small case size, and low cost. Low distortion and low shock noise make these capacitors well-suited for use in analog or digital mobile devices. Excellent heat-resistance, high break-down voltage, and mechanical strength make these capacitors well suited for replacing film capacitors.

Applications: • Signal line for AV products • Analog signal coupling applications • PLL circuit of mobile phones • Good temperature characteristics for time-constant circuits, oscillation circuits and filters

Specifications: • Operating Temperature: -55°C ~ 125°C

COMPONENTS

Surface Mount Multilayer Ceramic Chip Capacitors

Features:
- High capacitance per unit volume
- For high frequency applications
- Ni-barrier terminations

Applications:
- Consumer electronics
- Telecommunications
- Automotive
- Data processing

The capacitor consists of a rectangular block of ceramic dielectric in which a number of interleaved metal electrodes are contained.

This structure gives rise to a high capacitance per unit volume.

The inner electrodes are connected to the two terminations by silver or copper dipping with a barrier layer of plated nickel and finally covered with a layer of plated tin (NiSn).

CDE CORNELL DUBILIER

Surface Mount MICA Capacitors

Cornell Dubilier mica capacitors are made of pure India Ruby muscovite mica. It is among the most inert and stable materials in the universe. When used as the insulator (dielectric) in a capacitor, the result is an electronic component with the ultimate in stability and reliability.

The capacitance change from zero to full rated operating voltage is generally less than ±0.1%. The series inductance of these capacitors is as little as eight nanohenrys (nH). The stability characteristics also apply to frequency which is why mica capacitors are so useful in the gigahertz range.

- Low impedance to beyond 1 GHz
- Near-zero capacitance change, all environments

SPECIFICATIONS:

Capacitance Tolerance:
- **Manufacturer's part number suffix letter:** D= ±0.5pF
- **Manufacturer's part number suffix letter:** J = ±5%

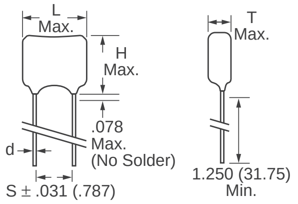
Dipped Silver MICA Capacitors — Radial Lead



Cornell Dubilier mica capacitors are made of pure India Ruby muscovite mica. It is among the most inert and stable materials in the universe. When used as the insulator (dielectric) in a capacitor, the result is an electronic component with the ultimate in stability and reliability.

The capacitance change from zero to full rated operating voltage is generally less than ±0.1%. The series inductance of these capacitors is as little as eight nanohenrys (nH). The stability characteristics also apply to frequency which is why mica capacitors are so useful in the gigahertz range.

Mica capacitors are so efficient that less that 0.05% of the applied volt-amperes is lost as heat. Dipped silver mica capacitors such as the Standard Types are manufactured by applying pure silver to ultra-thin mica plates. The plates are stacked and secured by brass clips with copper-clad steel leads welded to each clip. The extra mass of the metal acts as a heat sink and enables these capacitors to absorb voltage transients up to 100,000 volts per microsecond.

High Voltage Resistor — HVR

A multi layer metal film is deposited on a high-grade ceramic body. After a helical groove has been cut in the resistive layer, tinned electrolytic copper wires are welded to the end caps. The resistors are coated with a blue lacquer, which provides electrical, mechanical and climactic protection. The encapsulation is resistant to all cleaning solvents in accordance with "MIL-STD 202, method 215" and "IEC 60068-2-45". **Features:**
• Metal film technology • High pulse loading capability
Specificatons: • Limiting Voltage: 1600VDC (HVR25), 3500VDC (HVR37), 10,000VDC (HVR68)
• Temperature Coefficient: ± 250ppm/°C

0402 / 0603 / 0805 SMD 0.1%, 0.05% Thin Film Chip Resistors Ultra Precision / Ultra Reliable RG Series - 1/16, 1/10 Watt

Using the conventional properties of Thin Film Resistors, SSM has successfully achieved the environmental, resistance stability and sustained durability issues that are encountered while operating at higher temperatures. We call this "RG" Series (Resistor Great). Higher reliability parts are indispensable in the Automotive, Measurement and Medical Industries as quality requirements increase. Susumu provides a solution with the RG Series thin film chip resistors. The RG series provides excellent TCR, Low Current Noise, and Linearity specifications needed in high frequency applications. Tight tolerance allows for circuit simplification and the elimination of trim pots which leads to cost savings.

Specifications:

Performance: Inorganic protective coating assures high reliability, durability and protection against heat and moisture. **Operating Temperature:** -55°C ~ 155°C (100% Power at 85°C) **Thermal Derating:** The RG series is able to dissipate 100% of rated power at 85°C. For applications operating above 85°C, the user must derate the resistors in accordance with the derating curve listed. **Applications:** Suitable for automotive, measurement devices and any application where accuracy and reliability are required.

THIN FILM TECHNOLOGY
SSM SUSUMU CO., LTD

0402 / 0805 / 0815 / 0830 / 1206 / 2512 SMD 1%, 2% and 5% Thin Film Chip Resistors Low Resistance RL and PRL Series — 1/8, 1/4, 1/2, 1 and 2 Watt

Susumu's RL and PRL series current sensing resistors provide excellent heat dissipation which allows higher power handling in smaller package sizes. Their patented structure will not create "hot spots" and evenly distribute heat across the total surface area of the resistor.

A specially designed construction assures small dimensions and repressed surface temperature increase due to heat radiation and thermal conduction. This construction also minimizes the thermal effects on peripheral areas. Patent 2963671.

YAGEO Surface Mount 1% & 5% Thick Film Chip Resistors

DESCRIPTION: The resistors are constructed on a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste which is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to within tolerance, by laser cutting of the resistive layer. The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a lead/tin alloy. End terminations on RoHS Complaint parts are pure tin. -

Rated Continuous Working Voltage (RCWV):
The rated voltage at each resistance should be calculated from the following equation:
RCWV=$\sqrt{\text{P x R}}$
RCWV(V):P(W):R(Ω)
Maximum Overload Voltage = RCWV x 2.5

Panasonic 5 % Metal Oxide Film Resistors

Now Available In Tape and Reel

Matsushita fixed metal oxide film resistors feature small sized dimensions and have higher power rating at the same size as the conventional type.

Features:

Flame retardancy of the exclusively formulated inorganic insulative material exhibits an equivalent performance requirements of UL-94 (VE-O) and when operated at a potential less than 16 times RCWV, Matsushita metal (oxide) film resistors never flame nor arc.

The coating and markings resist normal washing of solvents, such as Freon (TE, TMC, TF), trichloroethane.

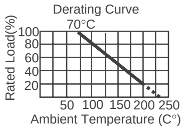
YAGEO 5% Metal Oxide Film Resistors

RSF Series

These Metal Oxide Resistors offer lower cost alternatives to Carbon Composition Resistors and General Purpose Metal Films. They can replace many low power General Purpose wirewound applications. These Metal Oxides meet overload tests in accordance with UL specification #1412 without producing a fire hazard. They withstand solvents in accordance with article Mil-Std-202E without producing mechanical or electrical damage.



Features: High surge/overload capability. Non-inductive design. Coating and marking resist Trichlorethelyne, Freon, and other cleaning agents. The RFS Series resistors are coated with layers of gray flame-proof lacquer.

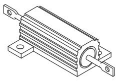
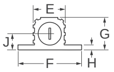
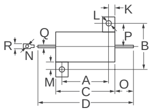
Aluminum Housed Chassis Mount Resistors – 5, 10, 25, 50 Watt, 1% (Precision Power Wirewound)







HEI's high-power aluminum housed resistors use centerless ground ceramic cores for uniform heat distribution. Molded in a special high temperature material and mounted in an extruded aluminum finned housing, these designs provide maximum power dissipation and reliability. They have tinned copperweld leads for solderability and meet or exceed MIL-R-18546, including "N" characteristic, and MIL-R-39009. **Specifications:** • Power Rating: Based on full power operation at 25°C, and maximum hotspot 275°C. • Mounting on proper heat sink as follows: For 5 and 10 Watt – use 4" x 6" x 2" x .040" (101.60 x 152.40 x 50.80 x 1.02mm) aluminum chassis; For 25 and 50 Watt – use 5" x 7" x 2" x .040" (127.00 x 177.80 x 50.80 x 1.02mm) aluminum chassis.

The resistor element is a resistive wire which is wound in a single layer on a ceramic rod. Metal caps are pressed over the ends of the rod. The ends of the resistance wire and the leads are connected to the caps by welding. Tinned copper-clad iron leads with poor heat conductivity are employed permitting the use of relatively short leads to obtain stable mounting without overheating the solder joint. The resistor is coated with a green silicon cement which is not resistant to aggressive fluxes. The coating is non-flammable, will not drip even at high overloads and is resistant to most commonly used cleaning solvents, in accordance with MIL-STD-202E, method 215 and IEC 60068-2-45.

Little Demon® Carbon Composition Molded Resistors

OD Series, OF Series and OA Series

Little Demons are small, reliable carbon composition resistors with exceptional strength. They are made tough by a molding process that combines the leads, insulation and resistive element into an integrated unit. Along with their small size, Little Demons perform with low noise, dissipate heat rapidly and offer high temperature stability. Color codes are readable even after prolonged use, thanks to a very durable coating that resists abrasions and chipping normally associated with automatic insertion equipment.

Features: • Molded insulation for high dielectric strength • Rugged construction • High surge capabilities • Comparable to “Mil” RC07, RC20, and RC32 types

Material: • Terminals: Solder-coated copper lead • Body: Molded Phenolic

Electrical: • Derating: Linearly from 100% @ 70°C ~ 0% @ 130°C

Features:
- Ohmite's new flat core winding technology allows for wirewound heat sinkable resistors affording a very low profile and superior thermal transfer characteristics when compared to conventional aluminum housed wirewound resistors. • Close mounting of heat sensitive components is possible due to only a slight rise of the temperature on the aluminum profile. • No heat sink compound is required because of large mounting surface.

Specifications:
- Dielectric Strength: 2500VAC peak • Working Voltage: 1200VAC • Insulation: Silicone Rubber & Mica. The Silicone is UL-recognized (UL 94 HB) to a working temperature of 220°C. Temperatures of up to 300°C can be endured for shorter periods, however this may cause an expansion of the silicone rubber with a possibility of reducing the dielectric strength.

Note: *Please see data sheet for heat sink recommendations.*

OHMITE 89 Type - Aluminum Housed Axial Lead Wirewound Resistors

The 89 Type are high performance axial-lead-type resistors. They are better suited to withstand vibration, shock and harsh environmental conditions than standard axial-lead resistors. The 89 Type are aluminum housed to maintain high stability during operation and to permit secure mounting to chassis surfaces. The housing also provides heat-sinking capabilities. The 89 Type resistors meet or exceed MIL-R-18546 specifications.

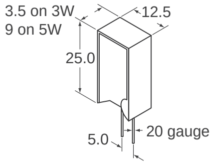
Ceramic Housed Radial Leaded Power Resistors



Dim. in mm

The TWW/TWM Series radial lead power resistors offer significant board space savings over axial leaded products. Generated heat is also kept away from the circuit board. They are recommended for commercial applications requiring low cost.

CTS CLEARONE™

BGA Terminators and Bias Networks

• Ceramic BGA Packaging • High density form factor • Designed for termination of parallel data busses • Designed for high frequency data transmission • Virtually eliminates parasitic capacitance and inductance • Ultra low channel capacitance • Flexible form factor; 1mm and 1.27mm pitch • *All dimensions in mm*

Now including Top Probe-able Devices†

The use of ball grid array (BGA) devices during the development phase of a project can represent some unique challenges in terms of circuit probing and device removal should device parameters need to be altered. CTS introduced the Top Probe-able devices to provide easy access to the internal circuitry of the BGA device without probing of the solder spheres, and eliminate the space consumed by test points on the circuit board. For parts available in Top Probe Configuration see Digi-Key parts marked with †.

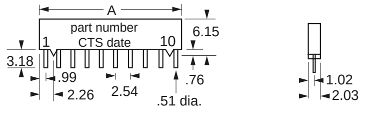
750 SERIES

Single-In-Line



Solid ceramic networks are more efficient because they operate at lower temperatures. This translates into long term reliability in a resistor network.

Specifications:

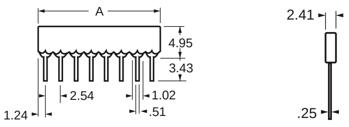
- **Resistance Values:** 22Ω through 1MΩ • **Resistance Tolerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

Features:

- Low-profile construction • Excellent power dissipation • High reliability • Alumina substrate

770 SERIES

Single-In-Line Conformal



Standard Products 770 series is available in 6, 8, and 10 pin sizes, and in many available resistance values.

Specifications:

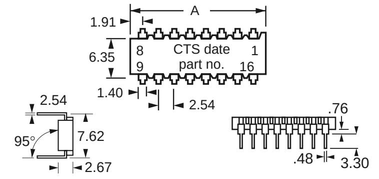
- **Resistance Values:** 22Ω through 1MΩ • **Resistance Tolerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

Features:

- High reliability resistors • Low-profile construction • .100" lead spacing • High reliability • Alumina substrate

760/761 SERIES

Dual-In-Line



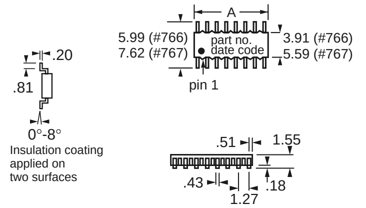
Requires 30% less board space than molded networks of the same power rating.

Specifications:

- **Resistance Range:** 22Ω through 1MΩ • **Resistance Tolerance:** Standard: ±2% • **Maximum Operating Voltage:** 50V not to exceed rated power • **Temperature Coefficient:** 100Ω through 1MΩ ±100PPM/°C typical, Below 100Ω ±200PPM/°C typical • **Operating Temperature Range:** –55°C ~ 125°C • **Storage Temperature Range:** –55°C ~ 125°C • **Dielectric Strength:** 100V

766/767 SERIES

Dual-In-Line Surface Mount



Thin cover coating generates higher power ratings. Thin proprietary cover protection keeps resistors near the surface, allowing the alumina substrate to act as a heat sink. That means higher power ratings than molded networks.

Specifications:

- **Resistance Values:** 22Ω through 1MΩ • **Resistance Tolerance:** ±2%. • **Temperature Coefficient:** ±100PPM/°C typical

768 SERIES

Made in the USA

Fig. 1

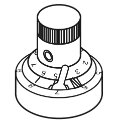

Fig. 2

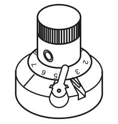

Fig. 3

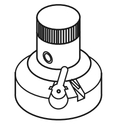

Fig. 4

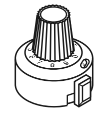

Features:

Anodized precision machined aluminum exterior. Accommodates potentiometer shaft - 1/4” (6.35mm) with 3/8” x 32-NEF-2A bushing. Requires only one square inch of panel space.

400 Series: 1” (25.40mm) **10 Turn Calibration**. This world class turns-counting dial is designed for multi-turn potentiometers up to ten turns or other rotary devices. The knob/scale attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel, therefore, accurate readings with a ratio of 1000 to 1 for ten turns are provided with no backlash or reading error. Available with or without locking mechanism.

500 Series: 1” (25.40mm) **1 Turn Calibrated scale.**

600 Series: 1” (25.40mm) **1 Turn Uncalibrated dial.**

3400 Series: 7/8” (22.23mm) **20 Turn Calibration.** Calibrated dial designed for multi-turn potentiometers up to twenty turns or other rotary devices. The turns counting digit appears in the window as the dial is rotated. Mounting bracket plate is installed between panel and panel nut, with the dial mounting directly to the potentiometer shaft.

Panasonic “ZNR” Transient/Surge Absorbers Type D and E

Features: • Excellent clamping voltage characteristic and fast response time (50nsec.) when subjected to impulse surges. Eliminates the discharge lag that is indurative of gap-type arrestors. • Bilateral and symmetrical V-1 characteristic curve. The ZNR can, therefore, be used in both in AC and DC circuits, for protection of either positive or negative transients. Panasonic ZNRs are zinc oxide nonlinear resistors whose resistance changes as a function of the applied voltage. The ZNR has a bilateral and symmetrical V-1 characteristic curve and can therefore be used in circuits in place of back-to-back zener diodes. This gives your circuit clamping protection in either direction. The ZNR thus provides a highly reliable and economical way to protect against repeated high voltage transients and surges such as those produced by lightning, switching surges and noise spikes.

Ratings: Varistor Voltage: The voltage between two terminals with the specified measuring current CmA DC applied is called Vc. The measurement shall be made as fast as possible to avoid heat affection.

Maximum Allowable Voltage: The recommended maximum sine wave voltage (rms) or the maximum DC voltage that can be applied continuously.

Withstanding Surge Current: The maximum current within the varistor voltage change of 510% with the standard impulse current (8/20µ second) applied one time.

Maximum Clamping Voltage: The maximum voltage between two terminals with the specified standard impulse current (8/20µ second) illustrated.

V Series: ZNR Surge Absorbers Type D, Series V, have been put on the market as a result of the development of a new ceramic material composition, higher quality of parts and materials used in the varistor and an improvement of manufacturing process control. They have a smaller size but a larger surge current and energy ratings so that they can be used in smaller equipment and exhibit their excellent surge protection ability in severe conditions. **Features:** • Improved in “Surge Current Handling Capability (@ 8/20 µs, 2 times)” by 1.6 to 3.0 times over the current conventional type. • Very large “Energy Handling Capability” absorbing transient overvoltages in compact sizes • Varistor voltages 250V-1850V are listed under UL1414, UL1449 and CSA 2221 01, varistor voltages 82-150V are UL1449 only • Wide products range for transient/surge protection on AC 100V to AC 480V nominal system with the maximum peak current ratings of 600A to 6500A (@ 8/20 µs, 2 times) • Operating Temperature Range -40°C ~ 85°C

Multilayer Varistor

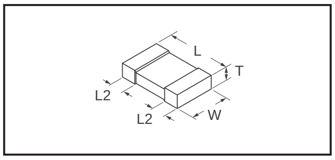
Zinc Oxide Type (0201, 0402 and 0603 Sizes) Surface Mount



Features:
Multilayer Varistor of Zinc Oxide ceramics suppresses pulse noise (ESD, burst-noise) and protects equipment from the transient surges. This Varistor is suitable for high-speed signal line due to small capacitance. • Low insertion signal loss due to small capacitance • Large withstanding capabilities to ESD (Max. 8kV by IEC test method) • Excellent solderability and superior heat resistance due to plate (Ni/solder) electrode

Application:
For suppression of pulse noise (ESD etc.) in electronic equipment • Cellular phone • PDA • PC and Peripheral equipment

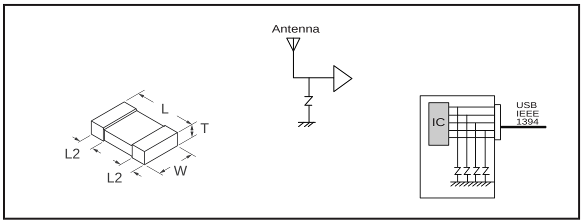
Multilayer Varistor–Ultra-Low Capacitance

Zinc Oxide Type (0201, 0402 and 0603 Size) Surface Mount



Features:
Multilayer Varistor of Zinc Oxide ceramics suppresses pulse noise (ESD, burst-noise) and protects equipment from transient surges. This Varistor is suitable for RF antenna/RF amplifier due to ultra-low capacitance. • Low insertion signal loss due to ultra-low capacitance • Large withstanding capabilities to ESD (Max. 8kV by IEC test method) • Excellent solderability and superior heat resistance due to plate (Ni/solder) electrode

Application:
For suppression of pulse noise (ESD etc.) in RF antenna/RF amplifier • Cellular phone • PDA • Wireless LAN applications • PC and Peripheral equipment • Interface: USB, IEEE 1394

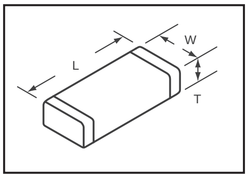
Static Guard Multilayer Ceramic Varistor TVS Surface Mount

ESD Protection for CMOS and Bi-Polar Systems



AVX StaticGuard devices are manufactured with the same multilayer construction as the AVX TransGuard Transient Voltage Suppressers (TVS).

The low capacitance of the StaticGuard products makes them ideal choices for ESD protection on high speed data lines.

Also, the low leakage current feature makes these parts optimal for battery operated equipment.

MultiGuard Multilayer Ceramic Varistor TVS Arrays ESD Protection for CMOS and Bi-Polar Systems

AVX's TVS Arrays address many trends in today's electronic circuits: mandatory ESD protection, mandatory EMI control, signal integrity improvement, PCB downsizing, reduced component placement costs and protection from induced slow speed transient voltages and currents. MultiGuard products offer numerous advantages which include a faster turn-on time (<1nS), repetitive strike capability and space savings.

When no problems exist, TVS diodes are invisible to the circuits they're protecting. But when potentially damaging transients occur, the TVS diodes provide high-speed "clamping" to prevent damage - after which they return to their electronically invisible state. Littelfuse TVS diodes are available in industry-standard packages.

Features: • Glass passivated junction • Low clamping factor • Uni-directional and Bi-directional • 100% surge tested • UL listed

SIDACtor® Surge Protection

Product Description:
SIDACtors® are solid state crowbar devices designed to protect telecom equipment during hazardous transient conditions. Capitalizing on the latest in thyristor advancements, Teccor designs their SIDACtors® with a patented ion implant technology. This technology ensures effective protection within nanoseconds, 500A surge current ratings, and simple solutions for regulatory requirements such as Bellcore 1089, TIA/EIA-1S-968, ITU-T K.20, ITU-T K.21 and UL60950.

Operation:
In the standby mode, SIDACtors® exhibit a high off-state impedance eliminating excessive leakage currents and appearing transparent to the circuits they protect. Upon application of a voltage exceeding the switching voltage (Vs), SIDACtors® will crowbar and simulate a short circuit condition until the current flowing through the device is either interrupted or drops below the SIDACtors® holding current (IH), once this occurs, SIDACtors® will reset and return to their high off-state impedance.

Battrax Subscriber Line Interface Circuit Protection (SLIC)

The Battrax® device is a solid state protection device that can be referenced to either a positive or negative voltage source. The B1100C_ is for a $-V_{REF}$. Designed using an SCR and an integrated diode, the B1100C_ Battrax® device begins to conduct at $\lvert -V_{REF}\rvert + \lvert -1.2V\rvert$.

The P0641S_ is a unidirectional solid state protection device constructed with a SIDACtor® device and an integrated diode. Used to protect SLIC IC's from being damaged during transient voltage activity. They help line cards meet various regulatory requirements including: GR1089, ITU K.20, K.21 and K.45, IEC 60950 and TIA/EIA-15-968.

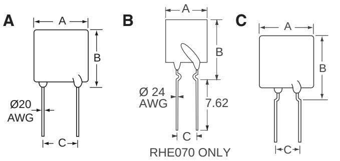
PolySwitch® Resettable Devices

PolySwitch resettable devices protect electrical and electronic circuits against excessive current, voltage, and temperature. After switching, the PolySwitch device is latched into its high-resistance, protective state by the small, sustained self-heating current. The device will reset only after it has cooled and the fault condition has been corrected, thus avoiding continuous cycling that could cause circuit damage. The device requires no manual resetting or replacement.

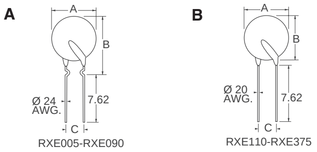
Definitions: • **Maximum Voltage:** The highest voltage the device can withstand (in its tripped state) without damage. • **Hold Current:** The maximum continuous current that will not cause the device to trip at 20°C. • **Trip Current:** The minimum continuous current that will cause the device to trip at 20°C. • **Maximum Current:** The largest fault current, at rated voltage, the device can interrupt without being damaged. **Maximum R:** Maximum non-tripped resistance of the device.

Fig. 1 — RGE and RHE Series



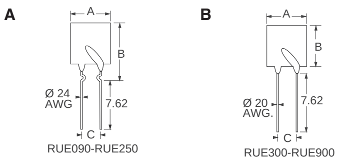
This product series can be used in a wide variety of automotive, computer and general electronics applications. The RGE devices feature high current carrying capability (up to 13 amps) in a small package with fast trip times.

Fig. 2 — RXE Series



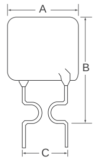
These products function as the general purpose line of circuit protection devices and are well suited for power supplies, alarm systems, speakers, motors and many other applications. The RXE series range in hold currents from .05 ~ 3.75 amps and complement the RUE devices by providing a higher voltage rating.

Fig. 3 — RUE Series



These devices are also designed to be used in a wide variety of general electronics applications. They complement the RXE series by providing a smaller form factor with lower resistance and higher hold current capability (up to 9 amps).

Fig. 4 — RTE Series



RTE series polyswitches are specifically designed for IEEE-1394 applications.

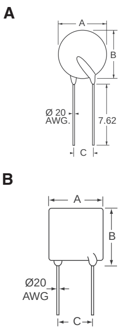
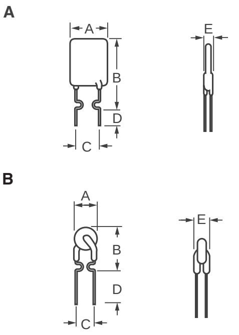
Fig. 5 — LVR Series



This product extends the proven PolySwitch technology of resettable overcurrent protection into higher voltage applications.

Fig. 6 — RUSB Series

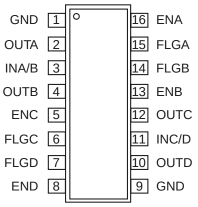


New PolySwitch RUSB devices are designed to meet USB and safety agency requirements.The RUSB family of leaded resettable devices offers overcurrent protection for USB applications.

Fig. 7 — RYC Series Power Distribution Switches

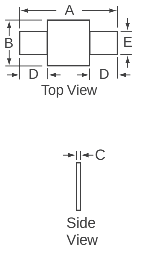
These USB power distribution switches enable power to USB ports upon USB controller commands. The switches signal the controller when faults such as overcurrent, over-temperature, undervoltage lock-out (UVLO) or over-voltage lock-out (OVLO) are detected.

SO-16



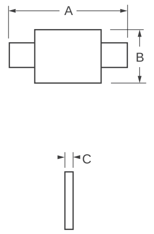
SO-16 Pin No.	Pin Function
5, 8, 13, 16	Enable (Input): Logic-compatible enable input. High input > 2.1V typical. Low input <1.9V typical
6, 7, 14, 15	Fault Flag (Output): Active-low open-drain output. Indicates overcurrent, UVLO, OVLO and thermal shutdown
1, 9	Ground: Supply return
3, 11	Supply Input: Output MOSFET drain. Also supplies ICs internal circuitry. Connect to positive supply
2, 4, 10, 12	Switch Output: Output MOSFET source. Typically connect to switched side of load

Fig. 8 — LTP Series



Similar to the SRP family of PolySwitch strap products, LTP devices help provide reliable, non-cycling protection for rechargeable batteries and have a slim, low-profile design that makes them easy to install. LTP devices also offer additional protection at elevated temperatures.

Fig. 9 — SRP Series



These products help provide reliable, non-cycling protection for rechargeable batteries. Weldable nickel leads and a narrow, low-profile design make these devices extremely easy to install on the edges of battery packs.

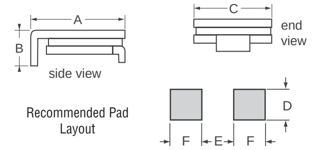
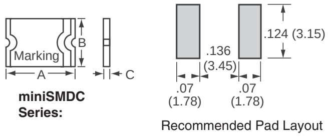
Fig. 10 — SMD



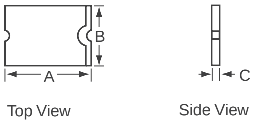
This product series is specifically designed for surface mount applications. The products range in hold currents from 0.3 amps to 3.0 amps and voltages from 6 volts to 60 volts. These devices are ideally suited for high density board applications in computer and computer peripheral products, telecommunications and general electronics applications. They are designed to be reflowed onto a PCB using standard surface mount processes. Packaged per EIA-481 standard.

Fig. 11 — miniSMD



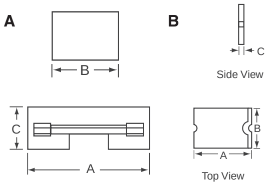
The miniSMD resettable devices extremely small size makes them excellent choices for keyboard and mouse ports, SCSI devices, battery packs, PC cards and sockets, cellular modems and phones, and portable electronic equipment. SMT packaging for automated assembly compared to SMD the miniSMD offers: 40% reduction in size, 300% faster time to trip, 50% reduction in DC resistance, 66% reduction in profile, 80% reduction in mass and drop in replacement for the NANO 2 device in many applications.

Fig. 12 — microSMD



This product series is designed for surface-mount applications. Its smaller component size enables installation on crowded printed circuit boards and in small end-user devices such as digital cameras, personal digital assistants (PDAs) and palm-top computers. The new low hold current devices are ideal for protecting industrial sensors and data acquisition systems.

Fig. 13 — nanoSMD



The nanoSMD series reduces the component size to a 1206 footprint, nearly half the size of the microSMD series and one-quarter the size of the popular miniSMD series. The industries fastest time to trip. Smaller size saves board space and cost. Compatible with high volume electronics assembly.

SiBar Thyristor Surge Protectors

SiBar thyristor surge protectors are designed specifically for telecommunications and computer telephony applications, including: • Modems • Fax machines • PBX Systems • Phones • POS Systems • Analog and digital linecards • Other customer premise and network equipment requiring protection.

Features: • Bidirectional transient voltage protection • High off-state impedance • Low on-state voltage • High surge capability • Short-circuit failure mode • Surface-mount technology • UL 497B recognized, file #E179610 SiBar thyristor surge protectors are bidirectional silicon devices that foldback in the presence of transient overvoltage faults. When the breakover voltage of a SiBar device is exceeded, the device switches from high to low impedance to protect sensitive downstream equipment from harmful voltage surges. The device remains latched in a low-impedance state until the current decreases below the hold current, at which point the device returns to its high-impedance state. SiBar devices may be used in conjunction with PolySwitch resettable devices in telecommunications applications, including network equipment and customer premise equipment. Proper selection of both devices can provide reliable, self-resetting overvoltage and overcurrent protection, allowing designers to meet worldwide telecommunications standards and to lower equipment-service and warranty cost.

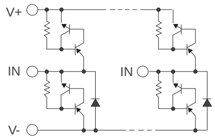
Littelfuse® ESD Transient Voltage Suppression Arrays



Functional Block Diagram

This is an array of SCR/Diode bipolar structures for ESD and over-voltage protection.

The SCR Structures are designed for fast triggering, if a transient pulse is detected with a voltage level greater than one V_{BE}, negative or positive pulse, above V+ or below V- the device will be activated.

Some of the applications where this device works very well is for Microprocessor/Logic Input Protection, Data Buss Protection, Analog Device Input Protection, or a Voltage Clamp.

Features:
- Fast Switching Times
- Low Input Leakage
- Low Input Capacitance
- Operating Temperature Range: -40°C ~ 105°C

PTC Resettable devices utilize a unique polymer-based, Positive Temperature Coefficient (PTC) material to protect electrical circuits against overcurrent conditions.

PTC Resettable Operation:

In normal operation, the Littelfuse PTC has many conductive paths and a very low resistance. In an overcurrent condition, the temperature of the polymer material rises. This dramatically reduces the conductive paths resulting in an immediate rise in resistance. In this condition the device provides circuit protection by significantly limiting the flow of current. However, once the cause of the initial overcurrent condition is eliminated, the Littelfuse PTC cools down and resets to a low resistance value permitting the normal current flow to resume.

Agency Approvals:

• UL: Recognized under Components Program of Underwriters Laboratories • CSA: Recognized under Component Acceptance Program of the Canadian Standards Association • TUV approved

ELECTRICAL DEFINITIONS:

• **Ihold**: Hold Current: maximum current device will sustain for 4 hours without switching at 20°C • **Itrip**: Trip Current: minimum current that will switch the device into a high resistance state at 20°C • **Isc**: Maximum short circuit current device can withstand at rated voltage • **Ril**: Minimum initial resistance of device at 20°C, prior to tripping • **Rat**: Maximum measured resistance in the nontripped state 1 hour post reflow with reflow conditions of 245°C for 20 seconds.

NOTE: *Devices are not intended to be used for continual, repeated tripping.* ***CAUTION:*** *Operation beyond the specified ratings may result in damage and possible arcing and flame.*

Note (1): The product is 100% tested for 30VDC operating voltage at 25°C. Continuous operation with higher than 12VDC under extreme temperature and humidity may cause increasing leakage current and/or shifting device resistance. However, even under severe environmental test, characteristics of the device did not change up to 12VDC operation.

Note (2): Some shifting in characteristics may occur when tested over several hundred ESD pulses at very rapid rate of 1 pulse per second or faster.

Note (3): Per IEC 61000-4-2, 30A @ 8kV, level 4, clamp measurement made 30ns after initiation of pulse, all tests in contact discharge mode.

Note (4): Trigger measurement made using Transmission Line Pulse (TLP) method.

Note (5): PolySurg devices are capable of withstanding up to a 15kV, 45A ESD pulse. Device ratings are given at 8kV per Note 2, unless otherwise specified.

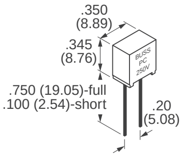
PC-TRON® Subminiature Fuses

Characteristics:

Offers short-circuit performance which until now could only be found in much larger size glass tube fuses. At 250VAC, the 1/2 to 3 amp PC-Tron can safely interrupt 50 amperes; at 125VAC the 1/2 to 5 amp versions can interrupt 10,000 amperes. This makes the PC-Tron subminiature fuse ideal for line-side protection of power supplies.



Time Current:

• Carry 100% of rating for 4 hours minimum; open at 200% of rating in 10 seconds maximum

Construction Material: • Body: High temperature plastic • Leads: Tin plated copper

Agency Approvals: UL Recognized and CSA Certified

CANTHERM

Encapsulated Thermal Switches

Encapsulated Thermal Switches are ideal for sensing the temperature of a surface or of stagnant air in an enclosure. Available with PC pins or with flexible wire leads for remote installation. Their high temperature resistance and high dielectric strength make it ideal for protecting heatsink-mounted semiconductors. Other applications would be protecting power supplies, or simply turning on a fan at a desired temperature.

Current Sensitivity: The thermal switches are not current sensitive at rated currents. At loads above the rated values, up to maximum loading there is self-heating of the current carrying contacts.

Insulation Resistance: 2500 V @ 25°C, Leads to Earth 1500 V @ 100°C. Across open contacts, dependent on response temperature: 500 V eff. AC.

Marking: Response temperature in clear text (5°C steps). Normally Closed = blue or black (epoxy); Normally Open = red (epoxy)

Bi-metal Cutouts, Temperature Regulators / Temperature Limiters

The thermal response works a bimetal snap element electrically connected to the switch contact. The switch system is current insensitive. The thermal switches react only to external thermal effects. Double contacts ensure high switch performance and long service life. The housing, base, and the mounting brackets are voltage-free (Standard version: base and mounting brackets are aluminum-plated steel). Heat transfer occurs directly through the metallic base via convection, radiation and conduction in gaseous and solid media. The mounting flange is floating and can be rotated to any desired position with respect to the electrical terminals.

ADVANTAGES:
* High pressure resistance
* High response sensitivity
* Numerous applications
* Various housings, connections and mounting styles

Magnetic Hydraulic Circuit Breaker

Dimensions in mm

Fig. 1

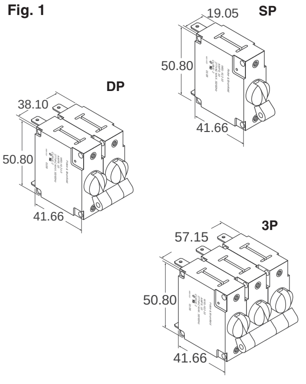

Fig. 2

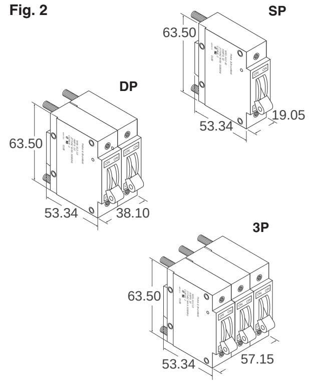

The W6/W9 series are designed for the international market. Magnetic hydraulic breakers are a proven design where the hydraulic delay provides tripping that is highly tolerant to changes in ambient temperatures. W9 units have ON/OFF molded into the area at the base of the toggle.

- **Calibration:** Breakers will hold 100% of rated current. Breakers may trip between 101% and 124% of rated load. Breakers must trip at 125% of rated load and above. • **Operating Temperature:** -40°C ~ 85°C.

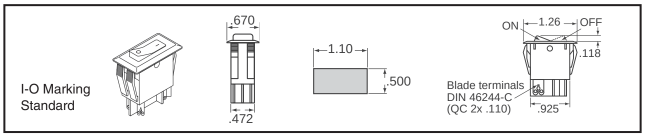
E-T-A
Circuit Protection & Control

E-T-A circuit breakers for equipment are designed as safety critical items for protection during equipment failure. These circuit breakers may be required to operate just occasionally or very often during the life of the equipment and can confidently be reset by inexperienced personnel.

Thermal breakers respond in a similar manner as a slow blow fuse. All thermal breakers carry 100% rated current continuously and trip within one hour at 140% rating. Selection should be based on 125% of your maximum current required. Magnetic breakers are fast-acting devices which are highly tolerant to changes in ambient temperatures and sensitive to small overloads.

Combination Rocker/Circuit Breaker Switches



Miniaturized single pole rocker/thermal circuit breaker combining ON/OFF switching and extremely fast overload performance in a single component. Returning the rocker switch through the OFF position and back ON will reset the mechanism and restore the supply. Illuminated versions – 120VAC lamp **Applications:** Motors, transformers, solenoids, PCBs, hand-held machines, appliances, instrumentation. **Voltage rating:** AC 250V; DC 50 up to 5A UL/CSA **Typical life:** 30,000 operation cycles **Ambient temperature:** -40°C ~ 70°C **Insulation voltage:** 2.5kV **Dielectric strength:** AC 3,000V

NOTES:

1. **Rated Functioning Temperature** (UL: TF, CSA, VDE, BEAB: Tf). The temperature at which a TCO changes its state of conductivity to open circuit with loading detection current only. Tolerance: ▽ : ±7°C; UL, CSA, VDE, BEAB: 0 / -10°C
2. **Functioning Temperature**: (Fusing-off temperature): The functioning temperature at which a TCO changes its state of conductivity to open circuit in the ambient air oven which increases temperature by 1°C per minute and with loading detection current of 0.1A or less.
3. **Maximum Operating Temperature:** The maximum temperature at which a TCO can be maintained while conducting rated current for 3000 h.
4. **Holding Temperature** (UL: TH, CSA: Th, VDE, BEAB: Tc). The maximum temperature at which a TCO can be maintained while conducting rated current for 168h which will not cause a change in state of conductivity to open circuit.
5. **Maximum Temperature Limit** (UL: TM, CSA, VDE, BEAB: Tm) The maximum temperature at which a TCO can maintain its mechanical and electrical properties without closing again for 10 minutes after a TCO has changed its state of conductivity.

‡ P10908-ND and P10910-ND are additionally approved for UL, on DC50V 5A.
† Std. DC Resistance is <15mΩ, A = <16mΩ, B = <17mΩ.

Storm Interface Environmentally Sealed Keypads

700 Series Sealed Keypads

The 700 Series of sealed keypads intended are for use individually or as modular building blocks to create more complex key-panel layouts. Unlike other sealed keypads, the 700 series have excellent tactile characteristics providing fast and reliable data input. When a keytop is depressed a conductive rubber pill makes contact with a gold on nickel plated PCB. These contact materials provide the highest level of protection against corrosive atmospheres and contact oxidization. Each keypad has interchangeable keytop legend tiles. Keypads come in two colors, gray or black, and feature a matrix style output. Instructions and pinouts are included. Compatible with Storm Universal Encoder part number "MGR1602-ND".

A7B Series:

Features: • Dustproof construction ensures highly reliable performance at low voltage and very small current even under adverse environmental conditions • Switch units can be assembled simply by fitting the integral hook coupler of each unit into the mating unit, thus eliminating the need of nuts and bolts for assembly • Switch assembly can be mounted easily by merely pushing the assembly into the mounting panel cutout from front

A7CN Series:

Features: • Designed specially for printed circuit boards • The transparent window plate fitted in the readout section prevents the ingress of dust and also protects dial characters against wear by incorrect handling • Switch units can be assembled simply by fitting the integral hook coupler of each unit, into the mating unit, thus eliminating the need of nuts and bolts for assembly

A7D Series:

Features: • Cost effectiveness and improved reliability achieved through insert-molding and fewer component parts • Plastic spring with minimal fatigue and a mechanical service life of 30,000

Pushbutton Switch Boots

APM's sealing boots are designed to protect your switches and potentiometers from hostile environments without compromising or interfering with the switches basic function. Boots create a full environmental seal even under high-pressure washdowns. Each seal is made from a tough, high tear strength elastomer that is resistant to most chemicals, lubricants, acids and solvents. UL and CSA recognized which facilitate easier agency listings and most Hexseals are QPL approved under MIL-B-5423.
